*Please see accompanying full Prescribing Information for Indications, complete Dosing Information and Important Safety Information.
NY Prescribers please submit prescription on an original NY State prescription blank. For all other states, if not faxed, prescription must be submitted on a state-specific blank, if applicable for your state. If required by your state, please indicate:

Step 4: PRESCRIBER AUTHORIZATION — Required

Prescriber's full, usual, and actual signature is required-no stamps. This form cannot be processed without the prescriber's signature.

By signing below, I certify that (a) the above therapy is medically necessary and that I will supervise the patient's treatment accordingly; (b) I have received the necessary authorizations, including those required by state law and the Health Insurance Portability and Accountability Act of 1996 (HIPAA), to release the above information and other health and medical information of the patient to Travers Therapeutics, Inc. (Travers), and the company or companies that help Travers administer the Total Care Hub services; (c) I am prescribing the drug listed for the patient listed in this application based upon my independent medical judgment. By my signature below, I agree to receive certain reimbursement support services. I authorize Travers and Eversana, acting on behalf of Travers, to use the information contained in the prescription above, my name, and the name, address, and telephone number of my medical practice, and other applicable information, in order to provide me, my practice, and the patient listed in this application with the aforementioned reimbursement support services. I understand that participation in the Total Care Hub services described does not constitute a guarantee on the part of Travers or parties acting on its behalf that (1) the drug I have prescribed will be reimbursed by the patient's or any insurance program, or (2) the patient will be eligible for any patient assistance program. I appoint Travers and its agents to convey this prescription—electronically or otherwise—to the dispensing pharmacy.

→ **Prescriber Signature:** _____
(No stamps permitted; prescriptions will be dispensed as written unless otherwise noted)

Date: _____

Step 6: PATIENT AUTHORIZATION—HIPAA Release

[Before signing, the patient and/or patient’s authorized representative should review and understand the terms of this Authorization and Release (“Authorization”) before signing. *If an authorized representative signs for the patient, please indicate the relationship to the patient.*]

I understand that the collection, use, and disclosure of the patient’s health information are protected under law. Information contained in this Patient Enrollment Form, such as the patient’s name, address, insurance, prescription, and medical information, is “protected health information” (“PHI”). By signing this Authorization, the patient agrees to the collection, use, and disclosure of the patient’s PHI as described below.

I understand that I may decline to sign this Authorization, and that doing so will not affect the patient’s ability to receive THIOLA® (tiopronin) or obtain insurance or insurance coverage.

I understand that once PHI about the patient is released based on this Authorization, federal privacy laws may not prevent Travers Therapeutics, Inc. (“Travers”) and company or companies who administer the Total Care Hub Support Services (“Services”) from further disclosing my information. However, I understand that such entities have agreed to use or disclose PHI they receive only for the purposes described in this Authorization or as required by law.

I also understand that I may revoke (withdraw) this Authorization at any time by sending a signed, written statement to the Total Care Hub by faxing it to (877) 473-3167.

Revoking this Authorization will prohibit PHI disclosures after the date written revocation is received by the Total Care Hub, except to the extent that action has been taken already on this Authorization. After I revoke this Authorization, the patient’s PHI may be disclosed among Travers and the company or companies that help Travers administer the Services in order to maintain records of the patient’s participation, but it will not be otherwise disclosed or used. Further information on Travers’s privacy practices can be found at <https://travers.com/privacy/>.

I understand that the pharmacy who may administer some of the Services may receive payment from Travers in exchange for securely sharing the patient’s PHI with companies who administer the Services.

By signing below, I authorize Travers Therapeutics, Inc. (“Travers”) and the company or companies that help Travers administer the Services, to do the following:

1. Request and receive information from the patient’s treating physician, healthcare provider, health insurer, or pharmacist necessary to investigate and resolve the patient’s insurance coverage, coding, or reimbursement inquiry or to provide the reimbursement support service that I have requested. Information may include the patient’s medical diagnosis, condition, and treatment (including prescription information), the patient’s health insurance, name, address and telephone number;
2. Collect, use, and disclose to each other any patient information including patient name, contact information, date of birth, information related to disease, diagnosis, and treatment, medical insurance information, some of which may be considered PHI or consumer health data as defined by applicable law, for the purpose of investigating and resolving the patient’s insurance coverage, coding, or reimbursement inquiry or to administer the Services, including entering and maintaining the patients in a database;
3. Disclose patient information as described above with Travers’s service providers, contractors, analytics service providers and business partners, including our business partners who support our research, surveys, focus groups, or interviews related to cystinuria and the effectiveness of the Total Care Hub program;
4. Disclose patient information as described above to the patient’s treating physician, healthcare professional, health insurer or pharmacist as necessary to resolve the patient’s insurance coverage, coding, or reimbursement inquiry. The patient authorizes their health insurer, treating physician, healthcare provider, or pharmacist to release PHI about the patient’s prescribed medications and medical condition requested by Travers and the company or companies that help Travers administer the Services;
5. Contact me by mail, email, telephone or alternative communication to discuss and receive marketing communications, invitations to participate in research, educational materials, treatment support services and patient engagement initiatives designed for people taking THIOLA, including nutritional support and counseling;
6. Provide financial assistance resources, including copay assistance or free drug programs if I meet program eligibility;
7. Communicate with my healthcare providers and health plans about my insurance benefit and coverage status and product administration (e.g., prescription, dosing, refills) and;
8. Contact the patient’s insurer, other potential funding sources, social workers, patient advocacy organizations, or patient assistance programs (e.g., the Total Care Hub) on the patient’s behalf to determine if the patient may be eligible for health insurance coverage or other funds, and disclose to them PHI about the patient’s prescribed medications and medical condition that has been provided by the patient or patient’s authorized representative or physician, healthcare provider, or pharmacist.

HIGHLIGHTS OF PRESCRIBING INFORMATION

These highlights do not include all the information needed to use THIOLA® safely and effectively.

See full prescribing information for THIOLA.

THIOLA (tiopronin) tablets, for oral use

Initial U.S. Approval: 1988

INDICATIONS AND USAGE

THIOLA is a reducing and complexing thiol indicated, in combination with high fluid intake, alkali, and diet modification, for the prevention of cystine stone formation in adults and pediatric patients 20 kg and greater with severe homozygous cystinuria, who are not responsive to these measures alone. (1)

DOSE AND ADMINISTRATION

- The recommended initial dosage in adult patients is 800 mg/day. In clinical studies, the average dosage was about 1,000 mg/day. (2.1)
- The recommended initial dosage in pediatric patients 20 kg and greater is 15 mg/kg/day. Avoid dosages greater than 50 mg/kg per day in pediatric patients. (2.1, 5.1, 8.4)
- Administer THIOLA in 3 divided doses at the same times each day at least one hour before or 2 hours after meals. (2.1)
- Measure urinary cystine 1 month after initiation of THIOLA and every 3 months thereafter. (2.1)

DOSE FORMS AND STRENGTHS

Tablets: 100 mg (3)

FULL PRESCRIBING INFORMATION: CONTENTS*

1 INDICATIONS AND USAGE

2.1 Recommended Dosage

2.2 Monitoring

3 DOSAGE FORMS AND STRENGTHS

4 CONTRAINDICATIONS

5 WARNINGS AND PRECAUTIONS

5.1 Proteinuria

5.2 Hypersensitivity Reactions

6 ADVERSE REACTIONS

6.1 Clinical Trials Experience

6.2 Postmarketing Experience

8 USE IN SPECIFIC POPULATIONS

8.1 Pregnancy

8.2 Lactation

CONTRAINDICATIONS

Hypersensitivity to tiopronin or any component of THIOLA (4)

WARNINGS AND PRECAUTIONS

- Proteinuria, including nephrotic syndrome, and membranous nephropathy, has been reported with tiopronin use. Pediatric patients receiving greater than 50 mg/kg of tiopronin per day may be at increased risk for proteinuria. (2.1, 5.1, 8.4)
- Hypersensitivity reactions have been reported during tiopronin treatment. (4, 5.2)

ADVERSE REACTIONS

Most common adverse reactions (≥10%) are nausea, diarrhea or soft stools, oral ulcers, rash, fatigue, fever, arthralgia, proteinuria, and emesis. (6)

To report SUSPECTED ADVERSE REACTIONS, contact Mission Pharmacal Company at toll-free phone # 1-800-298-1087 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

USE IN SPECIFIC POPULATIONS

Lactation: Breastfeeding is not recommended. (8.2)

Geriatric: Choose dose carefully and monitor renal function in the elderly. (8.5)

See 17 for PATIENT COUNSELING INFORMATION.

16 HOW SUPPLIED/STORAGE AND HANDLING

17 PATIENT COUNSELING INFORMATION

* Sections or subsections omitted from the full prescribing information are not listed.

FULL PRESCRIBING INFORMATION

1 INDICATIONS AND USAGE

THIOLA is indicated, in combination with high fluid intake, alkali, and diet modification, for the prevention of cystine stone formation in adults and pediatric patients 20 kg and greater with severe homozygous cystinuria, who are not responsive to these measures alone.

2 DOSAGE AND ADMINISTRATION

2.1 Recommended Dosage

Adults: The recommended initial dosage in adult patients is 800 mg/day. In clinical studies, the average dosage was about 1,000 mg/day.

Pediatrics: The recommended initial dosage in pediatric patients weighing 20 kg and greater is 15 mg/kg/day. Avoid dosages greater than 50 mg/kg per day in pediatric patients [see *Warnings and Precautions* (5.1)]. Use in Specific Populations (8.4)].

Administer THIOLA in 3 divided doses at the same times each day at least one hour before or 2 hours after meals.

Consider starting THIOLA at a lower dosage in patients with history of severe toxicity to d-penicillamine.

2.2 Monitoring

Measure urinary cystine 1 month after starting THIOLA and every 3 months thereafter. Adjust THIOLA dosage to maintain urinary cystine concentration less than 250 mg/L.

Assess for proteinuria before treatment and every 3 to 6 months during treatment [see *Warnings and Precautions* (5.1)].

Discontinue THIOLA in patients who develop proteinuria, and monitor urinary protein and renal function. Consider restarting THIOLA treatment at a lower dosage after resolution of proteinuria.

3 DOSAGE FORMS AND STRENGTHS

Tablets for oral use:

100 mg tablets: round, white and imprinted in red with “M” on one side

4 CONTRAINDICATIONS

THIOLA is contraindicated in patients with hypersensitivity to tiopronin or any other components of THIOLA [see *Warnings and Precautions* (5.2)].

5 WARNINGS AND PRECAUTIONS

5.1 Proteinuria

Proteinuria, including nephrotic syndrome, and membranous nephropathy, have been reported with tiopronin use. Pediatric patients receiving greater than 50 mg/kg of tiopronin per day may be at increased risk for proteinuria [see *Dosage and Administration* (2.2), *Adverse Reactions* (6.1, 6.2), *Use in Specific Populations* (8.4)]. Monitor patients for the development of proteinuria and discontinue therapy in patients who develop proteinuria [see *Dosage and Administration* (2.2)].

5.2 Hypersensitivity Reactions

Hypersensitivity reactions (drug fever, rash, fever, arthralgia and lymphadenopathy) have been reported [see *Contraindications* (4)].

6 ADVERSE REACTIONS

The following adverse reactions are discussed in greater detail in other sections of the labeling:

- Proteinuria [see *Warnings and Precautions* (5.1)]
- Hypersensitivity [see *Warnings and Precautions* (5.2)]

6.1 Clinical Trials Experience

Because clinical trials are conducted under widely varying conditions, the adverse reaction rates observed in the clinical trials of the drug cannot be directly compared to rates in the clinical trials of another drug and may not reflect the rates observed in practice.

Adverse reactions occurring at an incidence of ≥5% in an uncontrolled trial in 66 patients with cystinuria age 9 to 68 years are shown in the table below. Patients in group 1 had previously been treated with d-penicillamine; those in group 2 had not. Of those patients who had stopped taking d-penicillamine due to toxicity (34 out of 49 patients in group 1), 22 were able to continue treatment with THIOLA. In those without prior history of d-penicillamine treatment, 6% developed reactions of sufficient severity to require THIOLA withdrawal.

Table 1 presents adverse reactions ≥5% in either treatment group occurring in this trial.

Table 1: Adverse Reactions Occurring in One or More Patients

System Organ Class	Adverse Reaction	Group 1 Previously treated with d-penicillamine (N = 49)	Group 2 Naïve to d-penicillamine (N = 17)
Blood and Lymphatic System Disorders	anemia	1 (2%)	1 (6%)
Gastrointestinal Disorders	nausea	12 (25%)	2 (12%)
	emesis	5 (10%)	–
	diarrhea/soft stools	9 (18%)	1 (6%)
	abdominal pain	–	1 (6%)
	oral ulcers	6 (12%)	3 (18%)
	fever	4 (8%)	–
	weakness	2 (4%)	2 (12%)
	fatigue	7 (14%)	–
	peripheral (edema)	3 (6%)	1 (6%)
	chest pain	–	1 (6%)
	anorexia	4 (8%)	–
Metabolism and Nutrition Disorders	arthralgia	–	2 (12%)
Musculoskeletal and Connective Tissue Disorders	proteinuria	5 (10%)	1 (6%)
Renal and Urinary Disorders	impotence	–	1 (6%)
	cough	–	1 (6%)
Respiratory, Thoracic and Mediastinal Disorders	rash	7 (14%)	2 (12%)
Skin and Subcutaneous Tissue Disorders	eczchymosis	3 (6%)	–
	pruritus	2 (4%)	1 (6%)
	urticaria	4 (8%)	–
	skin wrinkling	3 (6%)	1 (6%)

Taste Disturbance

A reduction in taste perception may develop. It is believed to be the result of chelation of trace metals by tiopronin. Hypogeusia is often self-limited.

6.2 Postmarketing Experience

Adverse reactions have been reported from the literature, as well as during post-approval use of THIOLA. Because the post-approval reactions are reported voluntarily from a population of uncertain size, it is not always possible to reliably estimate their frequency or establish a causal relationship to THIOLA exposure. Adverse reactions reported during the postmarketing use of THIOLA are listed by body system in Table 2.

Table 2: Adverse Reactions Reported for THIOLA Pharmacovigilance by System Organ Class and Preferred Term

System Organ Class	Preferred Term
Cardiac Disorders	congestive heart failure
Ear and Labyrinth Disorder	vertigo
Gastrointestinal Disorders	abdominal discomfort; abdominal distension; abdominal pain; chapped lips; diarrhea, dry mouth; dyspepsia; eructation; flatulence; gastrointestinal disorder; gastroesophageal reflux disease; nausea; vomiting; jaundice; liver transaminitis
General Disorders and Administration Site Conditions	asthenia; chest pain; fatigue; malaise; pain; peripheral swelling; pyrexia; swelling
Investigations	glomerular filtration rate decreased; weight increased
Metabolism and Nutrition Disorders	decreased appetite; dehydration; hypophagia
Musculoskeletal and Connective Tissue Disorders	arthralgia; back pain; flank pain; joint swelling; limb discomfort; musculoskeletal discomfort; myalgia; neck pain; pain in extremity
Nervous System Disorders	ageusia; burning sensation; dizziness; dysgeusia; headache; hypoesthesia
Renal and Urinary Disorders	nephrotic syndrome; proteinuria; renal failure
Skin and Subcutaneous Tissue Disorders	dry skin; hyperhidrosis; pemphigus foliaceus; pruritus; rash; rash pruritic; skin irritation; skin texture abnormal; skin wrinkling; urticaria

8 USE IN SPECIFIC POPULATIONS

8.1 Pregnancy Risk Summary.

Available published case report data with tiopronin have not identified a drug-associated risk for major birth defects, miscarriage, or adverse maternal or fetal outcomes. Renal stones in pregnancy may result in adverse pregnancy outcomes (see *Clinical Considerations*). In animal reproduction studies, there were no adverse developmental outcomes with oral administration of tiopronin to pregnant mice and rats during organogenesis at doses up to 2 times a 2 grams/day human dose (based on mg/m²). The estimated background risk of major birth defects and miscarriage for the indicated population is unknown. All pregnancies have a background risk of major defect, loss, or other adverse outcomes. In the U.S. general population, the estimated background risk of major birth defects and miscarriage in clinically recognized pregnancies are 2% to 4% and 15% to 20%, respectively.

Clinical Considerations

Disease-associated maternal and/or embryo/fetal risk

Renal stones in pregnancy may increase the risk of adverse pregnancy outcomes, such as preterm birth and low birth weight.

Data

Animal Data

No findings of fetal malformations could be attributed to the drug in reproduction studies in mice and rats at doses up to 2 times the highest recommended human dose of 2 grams/day (based on mg/m²).

8.2 Lactation Risk Summary.

There are no data on the presence of tiopronin in either human or animal milk or on the effects of the breastfed child. A published study suggests that tiopronin may suppress milk production. Because of the potential for serious adverse reactions, including nephrotic syndrome, advise patients that breastfeeding is not recommended during treatment with THIOLA.

8.4 Pediatric Use

THIOLA is indicated in pediatric patients weighing 20 kg or more with severe homozygous cystinuria, in combination with high fluid intake, alkali, and diet modification, for the prevention of cystine stone formation who are not responsive to these measures alone. This indication is based on safety and efficacy data from a trial in patients 9 years to 68 years of age and clinical experience. Proteinuria, including nephrotic syndrome, has been reported in pediatric patients. Pediatric patients receiving greater than 50 mg/kg tiopronin per day may be at greater risk (see *Dosage and Administration* (2.1, 2.2), *Warnings and Precautions* (5.1) and *Adverse Reactions* (6.1)).

THIOLA tablets are not approved for use in pediatric patients weighing less than 20 kg or in pediatric patients unable to swallow tablets (see *Recommended Dosage* (2.1)).

8.5 Geriatric Use

This drug is known to be substantially excreted by the kidney, and the risk of adverse reactions to this drug may be greater in patients with impaired renal function. Because elderly patients are more likely to have decreased renal function, care should be taken in dose selection, and it may be useful to monitor renal function.

10 OVERDOSAGE

There is no information on overdosage with tiopronin.

11 DESCRIPTION

THIOLA (tiopronin) immediate-release tablets are a reducing and cystine-binding thiol drug (CBTD) for oral use. Tiopronin is N-(2-Mercaptopropionyl) glycine and has the following structure:

Tiopronin has the empirical formula C₆H₉N₃O₃S and a molecular weight of 163.20. In this drug product tiopronin exists as a dl racemic mixture.

Tiopronin is a white crystalline powder, which is freely soluble in water.

Each THIOLA tablet contains 100 mg of tiopronin. The inactive ingredients in THIOLA tablets include calcium carbonate, carnauba wax, ethyl cellulose, dimethylaminoethyl methacrylate; butyl methacrylate; methyl methacrylate copolymer (Eudragit E 100), hydroxy-propyl cellulose, lactose monohydrate, magnesium stearate, povidone, sugar, talc, titanium dioxide.

12 CLINICAL PHARMACOLOGY

12.1 Mechanism of Action

The goal of therapy is to reduce urinary cystine concentration below its solubility limit. Tiopronin is an active reducing agent which undergoes thiol-disulfide exchange with cystine to form a mixed disulfide of tiopronin-cystine. From this reaction, a water-soluble mixed disulfide is formed and the amount of sparingly soluble cystine is reduced.

12.2 Pharmacodynamics

The decrement in urinary cystine produced by tiopronin is generally proportional to the dose. A reduction in urinary cystine of 250-350 mg/day at tiopronin dosage of 1 g/day, and a decline of approximately 500 mg/day at a dosage of 2 g/day, might be expected. Tiopronin has a rapid onset and offset of action, showing a fall in cystine excretion on the first day of administration and a rise on the first day of drug withdrawal.

12.3 Pharmacokinetics

Absorption

THIOLA Tablets

When THIOLA single doses were given to fasted healthy subjects (n = 39), the median time to peak plasma level (T_{max}) was 1 (range: 0.5 to 2.1) hours.

Elimination

Excretion

When tiopronin is given orally, up to 48% of dose appears in urine during the first 4 hours and up to 78% by 72 hours.

13 NONCLINICAL TOXICOLOGY

13.1 Carcinogenesis, Mutagenesis, Impairment of Fertility

Carcinogenesis

Long-term carcinogenicity studies in animals have not been performed.

Mutagenesis

Tiopronin was not genotoxic in the chromosomal aberration, sister chromatid exchange, and *in vivo* micronucleus assays.

Impairment of Fertility

High doses of tiopronin in experimental animals have been shown to interfere with maintenance of pregnancy and viability of the fetus. In 2 published male fertility studies in rats, tiopronin at 20 mg/kg/day, intramuscular (IM) for 60 days induced reductions in testis, epididymis, vas deferens, and accessory sex glands weights and in the count and motility of cauda epididymal sperm.

16 HOW SUPPLIED/STORAGE AND HANDLING

100 mg round, white, immediate-release tablet imprinted in red with "M" on one side and blank on the other side: Bottles of 100 NDC 0178-0900-01.

Store at 25°C (77°F); excursions permitted to 15-30°C (59-86°F) [see USP Controlled Room Temperature].

17 PATIENT COUNSELING INFORMATION

Lactation

Advise women that breastfeeding is not recommended during treatment with THIOLA (see *Use in Specific Populations* (6.2)).
